## U.S. fertility hit all-time low in 2016 ... and 2006 ... and 1976

Fertility indicators

HOME > NEWS IN BRIEF

### THE U.S. BIRTH RATE IS STILL FALLING

But that's not necessarily a bad thing.

KATE WHEELING · JAN 11, 2019

The fertility rate in the United States has been falling for what would be the seventh straight year, according to the CDC's National Vital Statistics Report. This marks the seventh straight year that the rate has declined.

In 2017, the nationwide fertility rate was 1,765.5 births per 1,000 women necessary to keep the population from declining. South Dakota, for example, had the highest fertility rate at 2,100, while Washington, D.C., had the lowest with 1,300. Birth rates above replacement levels are considered healthy.

Though the report doesn't speculate about why fertility is falling, it does note that cultural shifts, economic anxiety, and a slew of other factors could be contributing.

"It seems like the immediate causal factor is probably that cultural shifts, economic anxiety, and a slew of other factors could be contributing."

"It seems like the immediate causal factor is probably that cultural shifts, economic anxiety, and a slew of other factors could be contributing."

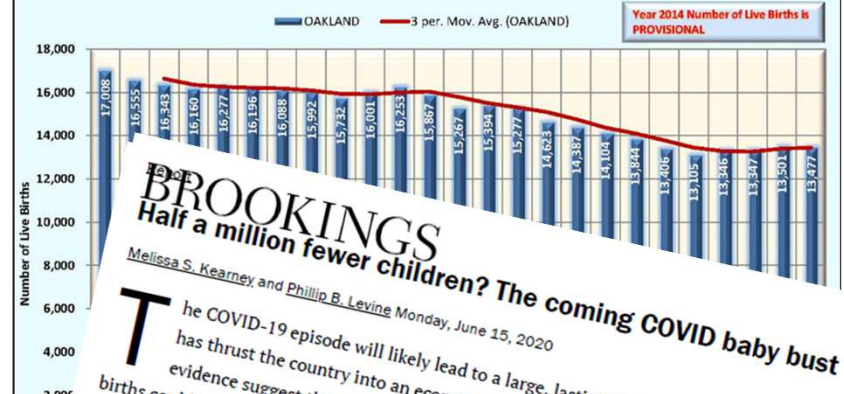

Childbearing decisions are often tied to our feelings about the economy. The economic indicators have improved, people are feeling more confident about the future.

Stagnant wages after the last recession coupled with Millennials with too much financial anxiety are also factors. Two-thirds of first-time mothers in the U.S. are Millennials, a national paid survey found.

Institute. A little over half of U.S. women have a college degree. And childcare can be a crippling expense.

And childcare can be a crippling expense.

Half a million fewer children? The coming COVID baby bust

Melissa S. Kearney and Phillip B. Levine Monday, June 15, 2020

The COVID-19 episode will likely lead to a large, lasting baby bust. The pandemic has thrust the country into an economic crisis, and evidence suggests that the baby bust will be larger than the 1918 Spanish Flu.

## Number of Michigan births, 1900 to 2018

...ion. Economic reasoning and past behavior suggest that the decline in births next year. We base this on fertility behavior, along with data from the 1918 Spanish Flu.

...playfully speculated that there would be a "tuck home" with their children in the next few months about birth spikes and "kouts." As it turns out, those spikes were not (see Figure 2Q). But the COVID-19 crisis is leading to a baby bust. It is leading to a baby bust. It is leading to a baby bust.

...why birth rates will decline. It is leading to a baby bust. It is leading to a baby bust.

...aviors and ultimately fertility is different than in the past. We need to focus on the baby bust. It is leading to a baby bust.

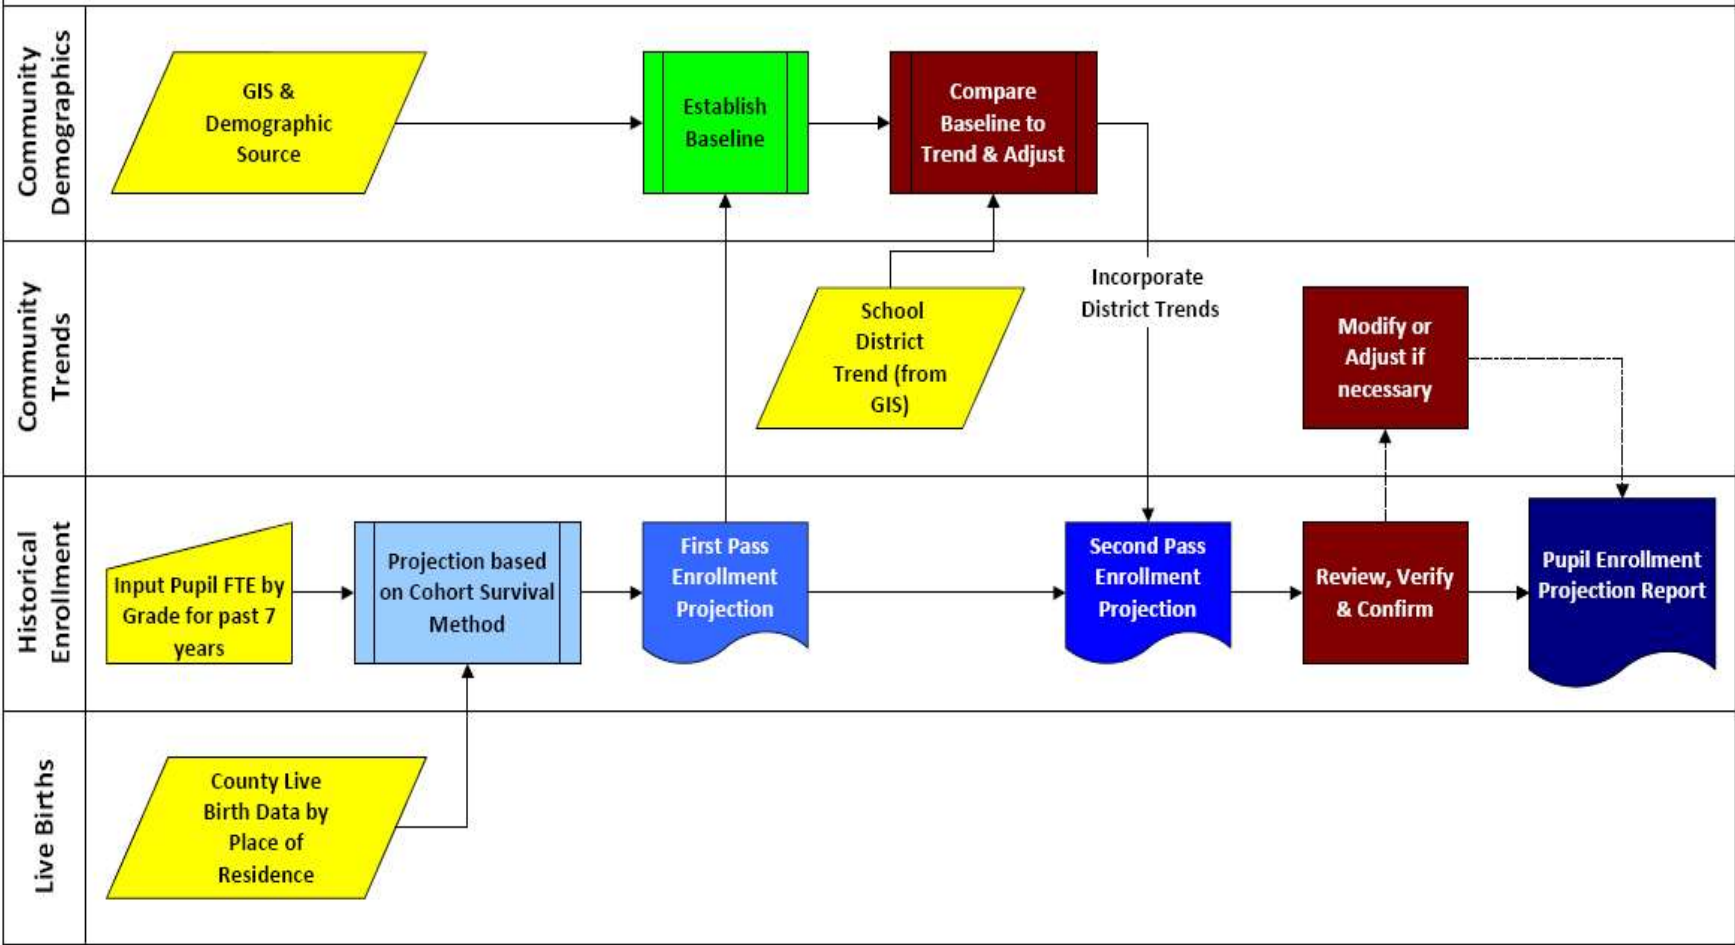

...control or abortion. It is leading to a baby bust. It is leading to a baby bust.

...own previous research. It is leading to a baby bust. It is leading to a baby bust.

...it is important to focus on the baby bust. It is leading to a baby bust. It is leading to a baby bust.

...ices. It is leading to a baby bust. It is leading to a baby bust.
